

Wi-Fi Smart Blood Pressure Monitor

 1 in 3 adults have high blood pressure

BPM Connect is a Wi-Fi blood pressure monitor providing medically accurate blood pressure and heart rate measurements with immediate feedback on the device and full data history in the app.

According to the American Heart Association and the European Society of Cardiology, home blood pressure monitoring allows improvement in blood pressure control rates and better prognostic indicators, as well as an effective way to help healthcare providers determine whether treatments are working. Also, it helps to identify white-coat syndrome and masked hypertension.

With BPM Connect, taking your blood pressure at home has never been so convenient. This easy-to-use portable blood pressure monitor features an LED screen so you can instantly view your results with color-coded feedback right on the device. Also, you don't need your smartphone in your pocket to turn on the device, launch the measurement or sync the data: BPM Connect synchronizes seamlessly via Wi-Fi to the free Health Mate app available on iOS and Android™. Data can also be synced via Bluetooth®. You can also easily share your reports with your doctor. The product features a battery life of up to 6 months and is rechargeable via micro-USB cable.
