

WITHINGS BODY SCAN

Clinically validated

Connected Health Station

Body Scan is the most advanced smart scale ever conceived. It integrates the breakthrough technology of segmental body composition, allowing a much higher level of precision to help spot fat and muscle imbalances. Designed to also identify changes in cardiovascular health, it offers a variety of cardiovascular measurements at every weigh-in, including: 6-Lead ECG, Pulse Wave Velocity and standing heart rate.

Developed with neurologists, Body Scan can also follow nerve health to help detect signs of peripheral autonomic neuropathies, to facilitate screening for disease and help physicians treat issues earlier.

Pursue your health goals while enjoying a state-of-the-art experience, including a one-year battery life, high-res color screen, automatic tracking for multiple users, and various modes. Enjoy a seamless experience thanks to Wi-Fi connectivity and sync all your health data to our highly rated app, where you can view trends, progress and daily inspiration for long-term improvement.

Features

METRICS

- Weight monitoring (kg, lb, st lb)
- BMI
- Segmental fat (left/right arm - left/right leg - trunk)
- Segmental muscle (left/right arm - left/right leg - trunk)
- Fat %
- Muscle mass % kg/lb
- Water %
- Bone mass % kg/lb
- Visceral fat
- 6-Lead ECG
- AFib detection
- Standing heart rate
- Vascular Age
- Pulse Wave Velocity
- Nerve Health Score

SEGMENTAL BODY COMPOSITION

Monitors weight (kg, lb, st lb), BMI, whole body composition (whole body fat, muscle mass, water percentage, bone mass) plus fat and muscle mass for each body part independently (torso, arms and legs) to spot fat and muscle imbalances which can help the user take action that can help focus their efforts.

STANDING HEART RATE

Provides standing heart rate at every weigh-in so anyone can track the evolution of heart rate over time, a good indicator of overall cardiovascular fitness.

NERVE HEALTH SCORE**

Assesses the nerve health of the feet via a Nerve Health Score. A low score may be a sign of peripheral autonomic neuropathy, small nerve damage, which is associated with complications of common chronic conditions.

You can improve these metrics via our behavior change programs, and the Nerve Health Score data can be easily shared with doctors to help manage any health issues.

**Pulse Wave Velocity and Nerve Health Score are only available in Europe

6-LEAD ELECTROCARDIOGRAM*

The Electrocardiogram (ECG) can detect AFib, the most common cardiac rhythm disturbance, which, if left untreated, can lead to blood clots and is known to increase the risk for stroke, heart failure and other heart complications.

*Via Withings ECG Monitor available on Body Scan

PULSE WAVE VELOCITY**

This metric measures the speed at which heartbeat generated waves move along the arteries. Lower Pulse Wave Velocity indicates better heart health and it can be lowered with proper diet & exercise to improve overall cardiovascular health.

VASCULAR AGE

Estimates the age of your arteries to give a clearer picture of your heart health. A Vascular Age value that is equal or lower than your chronological age indicates better vascular health.

MULTI-USER FRIENDLY

Automatically recognizes and tracks up to 8 users independently.

PREGNANCY MODE***

Allows easy weight tracking throughout pregnancy. It also provides personalized recommendations and can support the user through their pregnancy journey.

BABY MODE***

Accurately weighs even the smallest member of your family just by holding them in your arms.

LIFE-FRIENDLY FEATURES

Shows the local weather forecast, local air pollution score and previous day's steps (if you own a Withings tracker) at every weigh-in.

ATHLETE MODE***

Athletes tend to have a different body composition than the average user. By activating this mode, your scale's measurement algorithms will adjust to ensure you get the most accurate data.

EYES CLOSED MODE***

Choose to swap weight and body measurements on your scale screen for motivational messages. Use this mode to focus on your overall progress, rather than specific numbers.

DYNAMIC SCREENS

Displays personalized data, content and insights directly on the device's high-contrast LCD color screen. Reveals metrics and trends without consulting the app.

***Usage modes will be rolled out in a future update.
